Current Standard 1 text		Proposed Standard 1 revision text	
<b>1</b>	<b>Background</b>	<b>1</b>	<b>Background</b>
	<p>The Sustainable Biomass Partnership (SBP) was formed in 2013 by European utilities that are using biomass, mostly in the form of wood pellets or chips, in large thermal generating plants. Biomass-fired power and heat generation is seen as an important technology for achieving the EU's 2020 renewable energy targets and EU member states are adopting their own national approaches to ensuring that the biomass used is legally and sustainably sourced.</p> <p>SBP's objective is to develop the tools necessary to demonstrate that, as a minimum, solid biomass used for energy production meets these national requirements. The SBP Framework is designed as a clear statement of principles, standards and processes necessary to demonstrate such compliance. Wherever possible, the Framework takes into account and builds on existing regulatory mechanisms and on voluntary certification standards already applied to other forest product streams or to other biomass sources.</p> <p>The SBP Framework provides a means to collect data describing the nature of the feedstock as well as data to be employed in the regulatory calculations of greenhouse gas (GHG) savings from its use. It also provides a means to demonstrate that risks to forest carbon stocks are managed and that forests' carbon sequestration capability is maintained.</p> <p>Collectively, the six SBP Standards represent a certification framework, or scheme, against which organisations can be assessed for compliance by independent third-party Certification Bodies (CBs). An organisation that satisfactorily demonstrates compliance receives a certificate and is entitled to make SBP claims in relation to its biomass.</p>		<p>The Sustainable Biomass Program (SBP) is a certification system designed for woody biomass, mostly in the form of wood pellets and woodchips, used in industrial, large-scale energy production.</p> <p>SBP's certification system provides assurance that woody biomass is sourced from legal and responsible sources, and a means to collect and communicate sourcing and greenhouse gas (GHG) data along the supply chain, allowing companies in the biomass sector to demonstrate compliance with regulatory requirements.</p> <p>There are six SBP Standards, which collectively represent the SBP certification framework, or scheme, against which organisations can be assessed for compliance by independent third-party Certification Bodies (CBs). Wherever possible, the framework takes into account and builds on existing regulatory mechanisms and on voluntary certification standards already applied to other forest product streams or to other biomass sources. An organisation that satisfactorily demonstrates compliance receives a certificate and may be entitled to make SBP claims in relation to its certified biomass.</p> <p>The SBP framework is made freely available for use by all supply chain actors irrespective of whether or not they are SBP Certificate Holders or applying for certification.</p>

	The SBP Framework is made freely available for use by all supply chain actors irrespective of whether or not they are members of SBP.		
<b>2</b>	<b>Scope</b>	<b>2</b>	<b>Scope</b>
	This document (SBP Standard 1. Feedstock Compliance Standard) sets out the principles, criteria and indicators to be met by participating Biomass Producers (BPs) as part of a Supply Base Evaluation (SBE).		This document (SBP Standard 1. Feedstock Compliance Standard) sets out the principles, criteria and indicators to be assessed and verified by participating organisations as part of a Supply Base Evaluation (SBE).
	The requirements are applicable to woody feedstock used in the production of biomass including feedstock included in biomass and that used for drying during the production of biomass.		The requirements are applicable to woody feedstock, from the forest and from trees outside forests, used in the production of biomass including feedstock that is incorporated into biomass and that used for drying during the production of biomass.
	Feedstock shall not be sourced from large (>1000 ha) short rotation plantations that are fully dedicated to the production of biomass and that were established after 1 January 2015.		[No longer required]

2.1 General Principles	2.1 General Principles
<p>SBP aims to provide an effective and verifiable process that will assure end users that feedstock is legally and sustainably sourced. The Standard stipulates that a participating BP is the unit of certification for this standard and must implement these requirements.</p>	<p>SBP aims to provide an effective and verifiable process that will assure end users that feedstock is legally and responsibly sourced.</p>
	<p>The SBP takes a risk-based, regional approach to compliance. It is based on the principle that factors such as the strength of legislation and the implementation of best management practices determines whether feedstock is produced responsibly or not. Understanding these factors within the region where feedstock is sourced from allows organisations and the SBP to assign a level of risk that the requirements of the standard are being met or not. Where there is a risk that any indicator is not being met then that feedstock cannot be certified as SBP-compliant.</p>
	<p>It is the organisation's role to identify, assess and manage the risks within its supply base that any of the indicators and associated requirements within this standard are not being met.</p>
<p>Feedstock received with a claim from an SBP-approved Forest Management Scheme need not be evaluated against this Standard. Other SBP standards, including those relating to Chain of Custody (CoC) and the collection and communication of data are applicable.</p>	<p>[Moved to other Standards]</p>
<p>BPs do not normally manage all forested land from which they source feedstock. They must implement the systems specified here, and verify if feedstock is SBP-compliant.</p>	<p>Organisations seeking, or holding, SBP certification do not normally manage all land from which they source feedstock or all of the supply chain from the place of harvesting to their own operations.</p>
	<p>It is their role to implement appropriate control systems and procedures to verify if feedstock is SBP-compliant including implementing appropriate due diligence systems to assure themselves that their suppliers and contractors are compliant.</p>
<p>The definitions of 'sustainable' and 'legal' in this Standard are adapted from the UK's Central Point of Expertise of Timber (CPET) <a href="http://www.cpet.org.uk">www.cpet.org.uk</a> "Category B evidence", supplemented with the sustainability requirements for solid biomass defined in the Netherlands. The UK Department of Energy</p>	<p>[No longer required]</p>

	<p>and Climate Change (DECC), Timber Standard for Heat and Electricity, 2014 (henceforth 'the Timber Standard') was subsequently developed in recognition that "wood used for fuel is typically low value, and a significant proportion is expected to be sourced from forests in North America that are not yet certified". As such, the Timber Standard permits "a risk-based regional approach that uses credible information and</p>

<b>2.2</b>	<b>Normative elements in this Standard</b>	<b>2.2</b>	<b>Normative elements in this Standard</b>
	<p>This Standard does not stipulate what evidence must be provided to demonstrate compliance with each indicator, as this will vary among different operations. The Standard does provide examples of the means of verification, that is to say, how evidence of compliance with each indicator might be demonstrated. These examples are illustrative and are not normative.</p>		
			<p>The participating organisation is the unit of certification for this standard and shall implement these requirements in their sourcing of feedstocks.</p>
			<p>The organisation shall undertake a Supply Base Evaluation to identify and assess the risk that any of the indicators and associated requirements within this Standard are not being met.</p>
			<p>The organisation shall implement appropriate control systems and procedures to verify if feedstock is being sourced from SBP-compliant sources.</p>
			<p>Organisations shall ensure that all other relevant operators (suppliers and contractors) also comply with these requirements in relation to the goods and services that they source from them.</p>
			<p>The organisation shall implement relevant requirements in other SBP standards.</p>
	<p>The Standard also provides guidance to aid understanding of requirements and, where appropriate, provides sources of evidence for compliance with the indicator. This guidance is not normative.</p>		<p>The Standard also provides guidance to aid understanding of these requirements and, where appropriate, provides sources of evidence for compliance with the indicator. This guidance is not normative unless the guidance says 'shall' or 'must',</p>

			which indicate requirements strictly to be followed in order to comply with the standard.
	CBs will independently evaluate compliance of the BP against the normative indicators presented in this Standard.		Certification Bodies (CBs) will independently evaluate compliance of the organisation and any relevant operators against the normative indicators presented in this Standard.
<b>2.3</b>	<b>The role of the Biomass Producer</b>	<b>2.3</b>	<b>The role of the Organisation</b>
	The BP is the unit of certification for this standard. The BP will usually be an organisation that operates a facility such as a pellet mill, but can also be any organisation in the supply chain that takes legal ownership of feedstock or biomass. For example, with an in-forest chipping operation or where chips are delivered directly to a generator the chipping operator or the generator could assume the responsibilities of the BP. Similarly, a forest owners' cooperative could take on the responsibilities of the BP.		The organisation will usually be an organisation that operates a facility such as a pellet mill, but can also be any organisation in the supply chain that takes legal ownership of feedstock or biomass. For example, with an in-forest chipping operation or where chips are delivered directly to a generator the chipping operator or the generator could assume the responsibilities of the organisation. Similarly, a forest owners' cooperative could take on the responsibilities of the organisation.
			The organisation is responsible for ensuring compliance with the Standard in their own operations and for taking all reasonable efforts to ensure it in all suppliers and/or contractors within the supply base and supply chain from the place of harvesting of the feedstock to the organisation's operations.
	These responsibilities include implementation of the management systems and completing the Supply Base Report (SBR) and if necessary the SBE.		These responsibilities include implementation of the management systems and completing the Supply Base Report (SBR) and if necessary, the SBE set out in Standard 2.
<b>2.4</b>	<b>Locally Applicable Verifiers</b>		[Moved to Standard 2]
	The Standard is applicable globally and does not define the specific means of verification which are appropriate to each BP in determining risk. BPs must prepare Locally Applicable Verifiers (LAVs) by applying the SBP requirements in Instruction Note 1A.		[Moved to Standard 2]

<b>2.5</b>	<b>Components of a Supply Base Evaluation</b>		[Moved to Standard 2]
	The SBE comprises both a Risk Assessment (RA) and a Supplier Verification Programme (SVP). This Standard, together with Standard 2, specifies the requirements for the evaluation.		[Moved to Standard 2]
	The BP will need to develop systems and procedures to ensure that all indicators are low risk. Such systems may be devised by the BP or may build on existing systems examples of which include SFI Fiber Sourcing and Legality Verification Systems. Although not specified in this Standard, it is likely that such systems will include:		[Moved to Standard 2]
	<p>A sampling plan for assessing forest operations within the Supply Base;</p> <p>Records of those assessments;</p> <p>Contractual requirements with suppliers;</p> <p>Mechanisms to rank performance and development of a list of “approved suppliers”;</p> <p>Monitoring and updating this information.</p>		[Moved to Standard 2]
<b>2.6</b>	<b>SBP-endorsed Regional Risk Assessments</b>		[Moved to Standard 2]
	Where there is demand SBP will consider endorsing a Regional Risk Assessment (RRA) where the RRA has been completed in compliance with SBP requirements for endorsement. An endorsed RRA shall replace the requirement for the Risk Assessment (RA) component of the SBE for the region covered by the endorsed RRA.		[Moved to Standard 2]
<b>2.7</b>	<b>Evidence appropriate to the scale of the operation</b>		[Moved to Standard 2]

	The evidence must demonstrate compliance with the requirements of this Standard. The means of verification must be appropriate to the scale, intensity and level of risk associated with the SB.		[Moved to Standard 2]

	Please refer to separate SBP Glossary of Terms and Definitions document.		Please refer to separate SBP Glossary of Terms and Definitions document.

1	Principle 1 – Biomass feedstock is legally sourced	1	Principle 1 – Legality
1.1	Criterion: The Supply Base is defined		[Moved to Standard 2]
	<p><b>Includes parts of:</b></p> <p>Criterion 1.2: The forest owner and manager hold legal use rights to the forest (CPET L1)</p> <p>Criterion 1.3 There is compliance with the requirements of local, national and applicable international laws, and the laws applicable to Forest Management (CPET L2).</p> <p>Criterion 1.4 All applicable royalties and taxes have been paid (CPET L3).</p> <p>Criterion 1.5 There is compliance with the requirements of CITES (CPET L4).</p> <p>Criterion 2.4 Management of the forest ensures that forest ecosystem health and vitality is maintained (CPET S7).</p>	1.1	<p><b>Criterion</b></p> <p>Operators and operations are legal.</p>
1.2.1	<p><b>Indicator</b></p> <p>The BP has implemented appropriate control systems and procedures to ensure that legality of ownership and land use can be demonstrated for the Supply Base.</p>	1.1.1	<p><b>Indicator</b></p> <p>The organisation has implemented appropriate control systems and procedures for verifying that:</p> <p>Operations are legal.</p> <p>That must include:</p> <ul style="list-style-type: none"> <li>• Legality of ownership and/or land and resource use</li> <li>• Feedstock is legally harvested, supplied and produced, including in compliance with CITES and EUTR or other applicable legal trade requirements</li> <li>• Payments for harvest rights and timber, including duties, relevant royalties and taxes related to timber harvesting, are complete and up to date</li> </ul>

<p><b>Examples of means of verification</b></p> <ul style="list-style-type: none"> <li>• Existing legislation</li> <li>• Levels of enforcement</li> <li>• Documents demonstrating that the BP is a legally defined entity</li> <li>• Documentation showing legal ownership patterns in the region, level of enforcement, records of disputes over land tenure, etc. In situations where customary rights govern use and access, these rights are clearly identifiable</li> <li>• Long term unchallenged use</li> </ul>	<p>[Means of Verification moved to S2 and new standalone document]</p>
<p><b>Guidance</b></p> <p>Factors affecting the risks of compliance will include the effectiveness of the land tenure system in place in the Supply Base.</p> <p>Where there are, or have been, disputes, evidence should be available that fair compensation has been made to previous owners and occupants, and that this has been accepted with free, prior and informed consent (FPIC).</p>	<p><b>Guidance</b></p> <p>Certification is not a legal compliance audit.</p> <p>There should be evidence that systems are in place to ensure operations are legal.</p> <p>The organisation shall keep a registry of all applicable international, regional, national and local legislation.</p> <p>Applicable legislation includes that in force in the country of harvest, covering all aspects within this standard, including but not limited to, the following aspects:</p> <ul style="list-style-type: none"> <li>• Rights to harvest timber within legally gazetted boundaries</li> <li>• Payments for harvest rights and timber, including duties related to timber harvesting</li> <li>• Timber harvesting, including forest and tree management and silvicultural activities</li> <li>• Environmental impacts (water and soil protection)</li> <li>• Biodiversity conservation, (including rare, threatened and endangered species and ecosystems)</li> <li>• Third parties' legal rights concerning use and tenure that are affected by timber harvesting</li> <li>• Trade and customs, in so far as the forest sector is concerned</li> </ul>

		<ul style="list-style-type: none"> <li>• Labour conditions</li> <li>• Health and Safety Standards</li> </ul> <p>Factors affecting the risks of disputes over land use will include the effectiveness of the land tenure system in place in the Supply Base.</p> <p>Risks of legal non-compliance are greater in areas with high levels of corruption relating to the granting of harvesting permits and other aspects of the management, harvesting and wood trade.</p> <p>Where appropriate to the operation, CITES requirements are understood at planning and operational level, and the requirements are implemented.</p> <p>Lists of species purchased by organisations should be verified as being consistent with the species available in the Supply Base.</p> <p>It should be verified that tree species purchased by organisations are not listed in CITES or have been purchased with the appropriate permits and approvals.</p> <p>Where the forest or landowner or management organisation is not legally able to protect the area fully, there must be a system for working with appropriate regulatory bodies to identify, report, control and discourage unauthorised activities.</p> <p>Where illegal/ unauthorised activities are detected, appropriate action should be taken.</p> <p>Control systems and procedures must firstly stipulate the adequate protection measures for the particular forest habitat type and region, and secondly, verify that these are being implemented.</p>

		<b>3</b>	<b>Principle 3 – Carbon in the landscape is maintained or increased</b>
	<b>Criterion 2.9: Regional carbon stocks are maintained or increased over the medium to long term</b>	<b>3.1</b>	<p><b>Criterion</b></p> <p>As a result of sourcing feedstocks, carbon stocks in the supply base are maintained or increased.</p> <p>or</p> <p><b>Criterion</b></p> <p>As a result of sourcing feedstocks, carbon stocks in the supply base are not adversely affected</p>
2.9.1	Feedstock is not sourced from areas that had high carbon stocks in January 2008 and no longer have those high carbon stocks.		
	<p>Examples of means of verification:</p> <ul style="list-style-type: none"> <li>• Maps</li> <li>• Procedures and records</li> <li>• Regional, publicly available data from a credible third party</li> <li>• The existence of a strong legal framework in the region</li> </ul>		
	<p>Examples of areas that may have high carbon stock:</p> <ul style="list-style-type: none"> <li>• Wetlands: Land that is covered with or saturated by water, permanently or for a significant part of the year. These should remain as wetlands; that is biomass production should not result in drainage of previously undrained soil</li> <li>• Peatland: This should remain as peatland unless evidence is provided that the production of feedstock does not involve drainage of previously undrained soil</li> </ul>		

<p>2.9.2</p>	<p>Analysis demonstrates that feedstock harvesting does not diminish the capability of the forest to act as an effective sink or store of carbon over the long term.</p>	<p>3.1.1</p>	<p><b>Indicator</b></p> <p>The organisation shall undertake a risk assessment of the impacts of biomass harvesting on forest carbon within the supply base, to ensure that forest carbon stocks are maintained or increased, and uses the assessment to justify feedstock sourcing decisions.</p> <p>The organisation shall provide justification for the time frame applicable to the assessment.</p> <p>Or</p> <p><b>Indicator</b></p> <p>The organisation shall undertake a risk assessment of the impacts of biomass harvesting on forest carbon within the supply base, to ensure that forest carbon stocks are not adversely affected, and uses the assessment to justify feedstock sourcing decisions.</p> <p>The organisation shall provide justification for the time frame applicable to the assessment.</p>
	<p>Examples of means of verification:</p> <ul style="list-style-type: none"> <li>• Results of analysis of carbon stocks</li> <li>• Analysis of historic and present carbon uptake rates</li> <li>• Regional, publicly available data from a credible third party</li> <li>• The existence of a strong legal framework in the region</li> </ul>		<p>[Means of Verification moved to S2 and new standalone document]</p>
	<p>SBP recognises that at some times in some catchments, due to natural forest cycles that may be wholly unassociated with wood for energy, carbon stocks may decline for a period. These declines will be naturally recovered and carbon stocks will be maintained or increased.</p> <p>Assessment of risks to the carbon stock may include:</p> <ul style="list-style-type: none"> <li>• Collection of reliable data on current stocks, growth rates, age class distributions, and existing market requirements</li> <li>• Analysis of the data</li> </ul>		<p>The organisation shall undertake assessment and provide justification for sourcing feedstock within the following contexts:</p> <ul style="list-style-type: none"> <li>• Regions where growth &lt; drain. The Organisation must provide justification for the time period to which the assessment applies</li> <li>• Slow growing forest</li> <li>• High carbon stock areas. Definitions and examples of high carbon stock areas are found in the standalone guidance</li> </ul>

	<ul style="list-style-type: none"> <li>• Examination of various outcomes (changing species or productivity, disease, fire, other markets)</li> <li>• Consideration of risk over various spatial and temporal scales, with a minimum horizon of five to ten years</li> <li>• Awareness of pressures or opportunities from outside the supply area</li> <li>• Recognition that there may be periods of transition requiring management</li> <li>• Regular review</li> </ul> <p>Where there is a direct land use change, the carbon emissions associated with this may need to be calculated.</p>	<ul style="list-style-type: none"> <li>• Stumps and roots</li> <li>• Where demand for biomass could lead to diversion of feedstock from long term carbon stores</li> </ul> <p>To inform the risk assessment and feedstock sourcing decision, the organisation should also:</p> <ul style="list-style-type: none"> <li>• Consider whether there is evidence of dynamic response in the forest to increased economic demand for feedstock, measured over a justifiable period, providing evidence of its impact on carbon</li> <li>• Consider whether a robust carbon estimation needs to be undertaken. This might include a carbon stock and flow assessment, and should be based on best available data and methods</li> <li>• Establish systems and procedures to monitor the rate of carbon sequestration and storage within the supply base</li> <li>• Utilise relevant economic data on demand for alternative products in local markets to demonstrate the lack of alternative market for the fibre. The organisation may also provide evidence of systems in place to avoid using feedstocks which are high value or which may be used to produce longer use products</li> </ul> <p>Where there is uncertainty about the assessment of carbon impact, the organisation should take a conservative approach. Conservative means a consideration of the full range of potential carbon impacts and takes action to ensure that there is a low risk of negative impacts on carbon stocks within the supply base.</p> <p>Requirements elsewhere in the standard are relevant for ensuring forest carbon stocks are maintained or increased, including those relating to forest productivity, ecosystem functions, soil carbon, residue removals, regeneration/restocking of forests etc. The standalone guidance identifies those sustainable forest management activities which have relevance to forest carbon stocks and advises how they may be taken into account in the forest carbon risk based regional assessment.</p>

		<p><b>4.1.11</b></p>	<p><b>Indicator</b></p> <p>The organisation has adequate systems and procedures in place to ensure that: Suppliers and contractors are paid and treated fairly.</p>
			<p><b>Guidance</b></p> <p>Suppliers and contractors should be seen as partners with the organisation rather than providers of goods and services alone.</p> <p>As a result, the organisation:</p> <ul style="list-style-type: none"> <li>• shall ensure that suppliers and contractors rates of pay meet or exceed industry standards and which allow suppliers and contractors to provide benefits to their employees, including but not limited to             <ul style="list-style-type: none"> <li>○ Health care</li> <li>○ Sickness benefits</li> </ul> </li> </ul>

		<ul style="list-style-type: none"> <li>○ Retirement benefits</li> <li>○ Invalidity benefits</li> <li>○ Death benefits</li> <li>● Workers' compensation             <ul style="list-style-type: none"> <li>○ shall not violate national or other legal standards against the use of labour-only contracting, sub- contracting, or home-working arrangements, or through apprenticeship schemes where there is no real intent to impart skills or provide regular employment, nor shall any such obligations be avoided through the excessive use of fixed-term contracts of employment to avoid providing benefits and lower the cost of providing the service</li> <li>○ shall not violate national anti-trust provisions by including anti-competitive requirements in contracts with suppliers and contractors</li> </ul> </li> <li>● Shall pay suppliers and contractors in a reasonable amount of time. Payment should be received within 30 days of invoicing</li> <li>● Shall not withhold payments in order to force suppliers and contractors to continue working</li> <li>● Shall allow suppliers and contractors to terminate their contract provided that they provide reasonable notice</li> <li>● Shall not interfere with the suppliers and contractor's ability to negotiate in good faith and/or to create cooperatives for this purpose. Those engaged in negotiations should not be subjected to discrimination, harassment, intimidation or retaliation</li> <li>● Shall not intentionally reduce contract rates due to the receipt of incentives, rebates, grants or reductions in operating expenses by suppliers and contractors</li> <li>● Shall ensure that to every extent possible work performed is on the basis of a recognized contractual relationship that is consistent with national law and practice</li> <li>● Shall ensure that suppliers and contractors are treated as independent contractors and will not require those contractors to provide services through</li> </ul>
--	--	--

			<p>extenuating or abnormal times and circumstances</p> <p>The organisation should invest time and resources in building a long-term relationship with suppliers and contractors. The relationship should be equitable within which all parties feel that they have influence and derive benefits.</p> <p>Suppliers and contractors should feel that they are able to raise issues and concerns with the organisation that will be treated with respect and addressed appropriately.</p> <p>The organisation should communicate with its suppliers and contractors in a respectful, timely and clear manner so that all parties understand what is expected of them and that sufficient time is available to meet any contracted commitments.</p> <p>During audits, suppliers and contractors should not be asked to conduct activity which adds expense or is considered to be unreasonable in terms of the implementation of their contract. If they are, a contract amendment should be considered. Suppliers and contractors should also be free to speak freely during any audits.</p>
1.6.1	<p><b>Includes parts of:</b></p> <p>Criterion 1.6: Harvesting does not violate traditional or civil rights</p> <p>Criterion 2.2: Management of the forest ensures that ecosystem function is assessed and maintained, through both the conservation/set-aside of key ecosystems or habitats in their natural state, and the maintenance of existing ecosystem functions throughout the forest (CPET S5; S5a; 8b)</p> <p>Criterion 2.3: Management of the forest ensures that productivity is maintained (CPET S6; S6a; S6e)</p> <p>Criterion 2.5: Management of the forest ensures that legal, customary and traditional tenure and use rights of indigenous peoples and local communities related to the forest, are identified, documented and respected (CPET S9)</p> <p>Criterion 2.6: Appropriate mechanisms are in place for resolving grievances and disputes, including those relating to tenure and use rights, to Forest Management practices and to work conditions (CPET S10)</p>	4.2	<p><b>Criterion</b></p> <p>Biomass production benefits communities</p>
	<p><b>Indicator</b></p>		

	The BP has implemented appropriate control systems and procedures to ensure that feedstock is not sourced from areas where there are violations of traditional or civil rights.		
	<b>Means of Verification</b> <ul style="list-style-type: none"> <li>• Traditional and civil rights are identified</li> <li>• Procedures are in place to ensure rights are not violated</li> </ul>		
	<b>Guidance</b> 'Traditional rights' are rights expressed by social groups or peoples, who affirm those rights to their lands, forests and other resources, based on long established custom or traditional occupation and use.  Useful sources of information may include interviews with involved stakeholders.		
	<b>Sources of information include</b> <a href="http://www.globalwitness.org">www.globalwitness.org</a>		
2.2.1	<b>Indicator</b> The BP has implemented appropriate control systems and procedures to verify that feedstock is sourced from forests where there is appropriate assessment of impacts, and planning, implementation and monitoring to minimise them.	4.2.1	<b>Indicator</b> The organisation has implemented appropriate control systems and procedures to verify that:  There is an assessment of the likely social and community impacts of feedstock sourcing, and planning, implementation and monitoring to minimise them.
	<b>Examples of Means of Verification</b> <ul style="list-style-type: none"> <li>• Regional Best Management Practices</li> <li>• Supply contracts</li> <li>• Assessment of potential impacts at operational level</li> <li>• Assessment of measures to minimize impacts</li> <li>• Monitoring results</li> <li>• Publicly available information on protecting the values identified</li> </ul>		[Means of Verification moved to S2 and new standalone document]

<ul style="list-style-type: none"> <li>• Level of enforcement</li> <li>• Regional, publicly available data from a credible third party</li> <li>• The existence of a strong legal framework in the region</li> </ul>		
<p><b>Guidance</b></p> <p>Potential impacts of feedstock harvesting on ecosystems and biodiversity should be identified, with mitigation measures implemented in the field as necessary.</p> <p>Impacts should be monitored and there should be a mechanism to feed monitoring results back into operational practice.</p> <p>Impacts include those originating in the area of operation but impacting outside the area of operation, such as downstream.</p> <p>Assessment planning, implementation and monitoring should be based on scientific research and, if needed, information on comparable forests types.</p> <p>BPs may require suppliers and forest owners to adopt specific Best Management Practices and to be certified for certain tasks.</p> <p>These should be specified in purchasing or procurement policies.</p> <p>Feedstock sourced from stump material will require specific controls to minimise impact.</p> <p>Avoidable damage to the ecosystem is prevented by application of the most suitable</p> <p>and available methods and techniques for logging and road construction under the prevailing conditions.</p>		<p><b>Guidance</b></p> <p>Potential impacts both positive and negative of feedstock harvesting on communities should be identified, with mitigation measures implemented in the field as necessary.</p> <p>Impacts should be monitored and there should be a mechanism to feed monitoring results back into operational practice.</p> <p>Impacts include those originating in the area of operation but impacting on communities outside the area of operation.</p> <p>Assessment planning, implementation and monitoring should be based on scientific research and stakeholder and community engagement.</p> <p>Impacts include, but are not limited to:</p> <ul style="list-style-type: none"> <li>• Loss of tenure and use rights</li> <li>• Loss of access to areas with cultural, social and economic values used by communities</li> <li>• Loss of adequate access for recreation Provision of employment and economic opportunities</li> <li>• Health and welfare impacts on communities</li> <li>• Any potential impacts on food, water and other basic needs should be identified</li> <li>• Impacts of and on gender, racial or religious equality</li> </ul>
		<p><b>Sources of information include</b></p> <p>Roundtable for Sustainable Biomaterials (RSB) Rural and Social Development Guidelines RSB-GUI-01-005-02  <a href="https://rsb.org/wp-content/uploads/2020/06/RSB-GUI-01-005-02-Rural-and-Social-Development-Guidelines-v3.0.pdf">https://rsb.org/wp-content/uploads/2020/06/RSB-GUI-01-005-02-Rural-and-Social-Development-Guidelines-v3.0.pdf</a></p>

<p>2.3.3</p> <p><b>Indicator</b></p> <p>Analysis shows that feedstock harvesting, and biomass production positively contribute to the local economy, including employment.</p>	<p>4.2.2</p> <p><b>Indicator</b></p> <p>Analysis shows that feedstock harvesting and biomass production positively contribute to the local economy, including employment.</p>
<p><b>Examples of Means of Verification</b></p> <ul style="list-style-type: none"> <li>• Analysis of contribution to the local economy</li> <li>• Description of: <ul style="list-style-type: none"> <li>• The direct economic value that is created</li> <li>• Employment and personnel records</li> <li>• Policy, practice and the proportion of the budget spent on local suppliers</li> <li>• Procedures for appointment of local staff and their share of senior management.</li> </ul> </li> </ul>	<p>[Means of Verification moved to S2 and new standalone document]</p>
<p><b>Guidance</b></p> <p>Contributions to the local economy from feedstock harvesting and biomass production should be evaluated for positive and negative impacts.</p> <p>These should be calculated on the basis of economic performance indicators EC1, EC6, and EC7 of Global Reporting Initiative (GRI)</p> <p>Contribution to the local economy should include reasonable opportunities for employment to the local population, including indigenous peoples, as well as the local processing of timber and non-timber forest products.</p> <p>Contribution should be made to the development of local physical infrastructure and social services and programmes for the local population, including indigenous people, unless such infrastructure and social services are provided by government bodies.</p> <p>This contribution should be made in agreement with the local population.</p>	<p><b>Guidance</b></p> <p>The organisation should seek to increase the positive contributions to the local economy identified in the analysis.</p> <p>Contributions to the local economy from feedstock harvesting and biomass production should be evaluated for positive and negative impacts.</p> <p>These should be calculated on the basis of economic performance indicators EC1, EC6, and EC7 of Global Reporting Initiative (GRI)</p> <p>Contribution to the local economy should include reasonable opportunities for employment to the local population, including indigenous peoples, as well as the local processing of timber and non-timber forest products.</p> <p>Contribution should be made to the development of local physical infrastructure and social services and programmes for the local population, including indigenous people, unless such infrastructure and social services are provided by government bodies.</p> <p>This contribution should be made in agreement with the local population.</p>
